351 Engine Specifications, Cleveland, Windsor, Boss | Classic Cars. Ford offered two versions of the 351 engine, a Windsor 351 and a Cleveland 351. The Windsor motor is considered a small block. The Cleveland 351 is between a small block and a big block. Even though the Cleveland 351 came from the small block family, few parts will interchange.

While technically considered a small block engine in the same family as the 289 and 302-cubic inch engines, the 351-cubic inch V-8 has a taller block, larger connecting rods and a larger crankshaft. The 351 also has a firing order of 1-3-7-2-6-5-4-8 as opposed to the standard 1-5-4-2-6-3-7-8 Ford V-8 engines.

## ~~How to Time a Ford 351 | It Still Runs~~

The 351 blocks were as much as 1.300 in. taller to allow for a longer Stroke. You can spot the difference pretty easily by looking at the front of the engine. On a 302 (or smaller c.i.d.) blocks, the distributor mount is almost flush with the top of the block (where the intake sits).

Wolverine Engines~~

What i don't know ist the right compression. The current automotive engines i know of should better be above or around 160psi. The owner told me that he measured the compression two month ago and got around 120psi on each cylinder which was good with this engine. I have no clue if that is true (that it is good).

~~ford 351w compression — CorrectCraftFan.com

The 351W nodular-iron crankshaft has larger main and rod journals than the 289/302, along with a longer stroke. With this crank came longer connecting rods (5.956 inches) than you find inside the 289/302. New for 1969 was the only 351W-4V engine ever produced with 10.7:1 compression ratio.

Specifications~~

Planning on building a mildly beefed, free breathing, easy rolling (balanced) 351w for my inboard/outboard 20 ft deep V runabout. Any comments regarding the intake manifold and carb would be appreciated. I notice newer 5.7' marine's are rated at about 5000 rpm so that is probably the practical limit for a marine motor.

~~Ford Windsor~~

Before the Windsor arrived, the first 351 cubic inch engine found in the Ford F-series was based on the Ford M-block, destrocked from a 400 block to make 351 cubic inches. This motor was originally intended to replace the 390 big block in the 1977 model year, although it made quite a bit less power than the 390 (offering just 163hp).
