Section 36-2 During muscle contraction, the knoblike head of a myosin filament attaches to a binding site on actin, forming a cross-bridge. Powered by ATP, the myosin cross-bridge changes shape and pulls the actin filament toward the center of the sarcomere. The cross-bridge is broken, the myosin binds to another site on the actin filament, and the

Skeletal Muscular

Integumentary, Skeletal, and Muscular Systems
The construction of the tissues of the body involves developmental phenomena at two levels of organization. One is the level of individual cells, in which the cells that make up a tissue undergo increasing specialization through a process called cytodifferentiation (see discussion of restriction, determination, and differentiation, [p. 85]).

SKELETAL, MUSCULAR AND INTEGUMENTARY SYSTEMS

The skeletal system is the framework of the body. It is made of bones, which are dynamic to the body's needs. The muscular system is for movement of muscles and organs. It is made of different muscle tissues, and contraction causes movement. The integumentary system is for protection of the overall human body.
