Let's take a spring tide first, where the gravitational pull of the sun and the moon are at their greatest. Low water will be at its lowest and high water will be at its highest. This difference between low water and high water is the tidal range, and it is at a maximum on Spring Tide. All this volume of

water has to flow up and down the coast, roughly every 6 hours, and the speed at which it must travel is also at its maximum on a Spring Tide; maximum volume, maximum speed.

~~Kayaking with Tides - The Basics | Paddling.com~~

Understanding tides - a basic guide for open water sit on kayakers. With autumn now in full swing, more or less, we hear about how more and more paddlers are looking to keep on kayaking during the off season. Water wear and immersion apparel technology is such that staying warm isn't an issue. The correct drysuit and/or wetsuit will keep that body boiler steaming which helps stave off chill and prolong cold water paddle sessions.

~~Understanding tides - The sit on top kayak site~~

If you plan on doing any coastal kayaking, then you'll need to learn about how to deal with currents and tides in order to travel safely and efficiently in the ocean. Both can be predicted with incredible accuracy using tide books and marine charts. When the water is rising, it's a flood tide. When it's receding, it's an ebb tide.

~~Understanding Tides | Paddling.com~~

Learn to Sea Kayak » The aim of this course is to give the student the tools to enable them to plan and navigate effectively on coastal journeys in moderate sea conditions. This course is designed for those paddlers carrying out coastal journeys including islands up to 2 nautical miles offshore in areas of tidal movement up to 2 knots and is a prerequisite for those seeking their British Canoeing Sea Leader Award.

~~Coastal Navigation and Tidal Planning - Sea Kayak Plockton~~

Tides are as important as the weather to sea kayakers. Channels may be impassable, launch sites may involve long walks over sand or mud at low tide, whilst dumping surf, rocky landings or heavy traffic may occur at high tide. But the water doesn't just rise and fall as if by magic - to fill several square kilometres of a bay or sea loch with a three or four metre rise in water means moving tens of millions of cubic metres of water horizontally, creating significant flows which the paddler ...

Tidal Planning. 8. Tidal Information for the Port of Milford Haven. Milford Haven is the primary port for Pembrokeshire and the MHPA publish this pdf every year. We figure they won't get it wrong again after the Sea Empress disaster and so use this as our go to resource for tidal information at Milford Haven. 9. Easytide

~~55 Killer Resources for Planning Sea Kayaking in ...~~

Sea kayakers are recommended to avail of a tide table, as well as to know the time of occurrences of the tides during the scheduled day of the trip. Aside from tidal variations, there are tidal currents, which are characterized as the alternating movement of water across seas. Tidal currents, especially the turbulent ones, require good Paddling techniques. In Whitewater Kayaking, one can also encounter eddies and waves.
